FREE ACTIVITY SHEET · AGES 8–12

What Is a Browser?

A web browser is a program that opens websites. Examples are Chrome, Firefox, Edge and Safari.

When you type an address, the browser asks another computer on the internet for that page, then shows it on your screen.

Try it: label the browser

- Label these parts: address bar, back button, tabs, page area.
- Why do websites need addresses? Write one reason.
